Keeping you on track with the developments at Grahams Hi-Fi

No. 42 Winter 2009/10

“One of the five best hi-fi shops in the world”

ARENA Magazine

don't forget the vat man

Do remember that the current VAT rate of 15% will revert back to 17.5% on 1st January 2010. Any purchases will cost £21.74 per £1000 extra in the New Year!

Christmas 2009 opening hours

Our opening hours over Christmas and New Year will be as follows:

Thursday 24th December..... 10am – 4pm
Friday 25th December closed
Saturday 26th December Closed
Sunday 27th December Closed
Monday 28th December Closed
Tuesday 29th December 10am – 6pm
Wednesday 30th December..... 10am – 6pm
Thursday 31st December 10am – 6pm
Friday 1st January Closed
Saturday 2nd January 9am – 6pm

music at your fingertips

The way we listen to, store and access our music has been changing over recent years. Over 8 years ago, before the Apple iPod existed, we were already supplying digital music servers to our customers. With internet speeds increasing and more on-line music services becoming available, where our content is stored is becoming less important.

Whilst most internet downloads are compressed files (which are of lower quality than CD was when it was launched 25 years ago), we also have the ability to store all of your music in “lossless” formats and you can also purchase and download studio quality master recordings which can sound amazing.

There are many examples of this technology on the market and within the past few years both Linn and Naim have added “high end offerings”, which can sound even better than the CD players they are replacing.

We are constantly looking for the best cutting-edge solutions and our range of devices for streaming music and video has expanded and include a variety of options at different price and performance levels.

We now have products from Sooloos (Meridian), Naim Audio, Linn, Kaleidescape, Loewe and Sonos in our range. Each has its own differences and provides unique solutions which we describe in more detail over the following pages. All are available for demonstration at Grahams.

meridian sooloos 2.00

In 2008, Meridian Audio acquired Sooloos, a company established in New York in 2001 that manufactures networked home entertainment systems.

The Sooloos system is a source component like a CD player and is comprised of the *Control Ten* touch-screen device to navigate your CD collection, the *Ensemble* or a combination of the *Source One & TwinStore*. These include the hard drives to store the music files, and the outputs to connect it to a system, analogue or digital. The *Source One* is completely fanless making it completely silent – a perfect fit in any high-end audio system.

Your CD collection can be loaded via the drive in the *Control Ten* or the CD drive in a PC/Mac. Using sophisticated CD ripping technology, Sooloos ensures accurate data retrieval from even damaged discs. Instead of searching through shelves of CDs, every CD you own is now at your fingertips.

The outstanding feature of the Sooloos is its ease of use with its incredibly powerful interface. One tap on the *Control Ten* and the 17-inch high definition touch-screen displays the complete list of songs on the album, ready to play, along with the other albums by the same artist. You can also control the system using a PC, and an iPhone. The *Control Ten* can also be used to run Crestron applications to control your whole AV system. The big cover art on the *Control Ten* is reminiscent of browsing through an LP collection!

Offering 1TB as standard, it will rip discs into FLAC (lossless) files as well as simultaneously create smaller MP3s for use on a portable player.

kaleidescape

The Kaleidescape DVD and music system starts with the all-in-one mini-system which we featured in our last newsletter. This system is the reference bench-mark for DVD server technology and is used in most high end home and yacht installations. The storage devices used are "enterprise level" (from the same stables as large capacity commercial servers) to provide a robust and reliable solution. Remote rooms are handled by local players which stream either video or music from the central server(s). The more affordable mini system bring starting prices to under £7,000 for a complete solution which includes two zones of audio and one zone of video from the one box. The Kaleidescape system can be controlled using its own infra red remote, a Philips Pronto, a Crestron control system or using the recently launched iTouch or iPhone application.

linn

The Linn Digital Streaming solution started life with the flagship Klimax DS some two years ago. The range now includes players to match each of Linn's different system performance levels and comprises; Klimax DS (£11,400), Akurate DS (£3,900) and Majik DS (£1,800). While these are all stand alone devices which effectively replace a CD player, now available is the Majik DS-I (£2,500) which is a combination of Majik DS, Majik Kontrol and Majik power amp in one box. All of this technology will filter down into the Sekrit range of custom installed products, which will bring digital streaming into Linn's multi-room music offering.

The first of these products will be the Sekrit DS-I. This will be an integrated digital streamer and amplifier which can be simply connected to a pair of speakers (similar to the Majik DS-I). It will have a number of local inputs and, being an "open source" UPNP device (along with all the Linn DS products), can be controlled with a number of devices, ranging from a laptop, PC, Philips Pronto, iPhone or iTouch, PDA, Web tablet or even a Crestron control system.

We have found the sound quality of each DS product to be better than Linn's equivalent CD players, also allowing the playback of studio master – "high resolution" 24 bit 96khz recordings, which can sound absolutely stunning and is a big step forward in sound quality. There are a number of web sites which offer these including Linn Records. See left for a list of other web sites offering studio quality recordings.

sonos

The Sonos system has been around for a few years, and is based on wireless distribution of audio using its own "locked down" wifi network. It can of course also be hard wired. It has recently improved vastly with the introduction of a new touch screen controller, but what attracted us to add Sonos to our range, was the system's seamless integration with on-line music services such as Napster and Last FM. Internet radio is also a great feature for some of our international clients who want to listen easily to their home country radio. The audio performance may not be up in the league of some of our other offerings but the Sonos system does provide good value and facilities that are currently not available easily or cost effectively on other platforms. The control element makes play lists simple to produce with the user having no concern whether the music they are listening to is stored on a hard disc in their own home or somewhere on the Internet.

We push the performance of these systems by using the pre-amp version in most instances, which we partner with external DACs and power amplifiers.

Finally, the beauty of the system is that it can be retro fitted into homes with minimal wiring and can be easily added to an existing system to provide these additional music services. Prices start at a very modest £279 for the pre-amp and £279 for the touch screen controller. If you have an iPhone or iTouch already you can get a starter system for the cost of the basic pre-amp.

Recently launched is the S5 zone player which is an all-in-one speaker package with amplifiers and streaming device. This costs only £349 and again can be used with the Sonos touch screen or an iTouch or iPhone.

naim “connected hi-fi”

Naim serves two types of digital audio user. True high fidelity “multi-room” music throughout the house as part of a fully integrated home, and the “connected hi-fi” concept which will appeal to a user who simply wants to extend their hi-fi system into another room or two without compromise of sound or control.

Whilst more music content will no doubt come into your home via the internet, the transferring of your valuable CD collection into a digital storage device can be done well or averagely. All Naim’s servers feature “archival quality, bit-perfect transfer” from the original CD which means your source music will be as good as possible. The Naim system will also find and catalogue other media on your home network and make it appear as one seamless collection.

We have already mentioned the NaimNet multi-room system in previous newsletters and now the range comprises two room amplifiers, a multiple DAB/FM IP tuner (capable of providing 4 users with different stations at the same time), a single tuner and a comprehensive range of music servers all of which sound as you would expect from Naim.

Software improvement now allows control using an iTouch, iPhone, Philips Pronto, Web tablets, PCs, Crestron or even... from the front panel of the HDX hard disk music player.

rega isis cd player and osiris amplifier

We have recently added the Rega Isis CD player (£6,000) and Osiris integrated amplifier (£6,000) to our range. Both of these units are designed and built by Rega here in the UK. The Isis CD player is Rega’s 7th generation of CD player. The analogue section employs two Burr Brown PCM1794 digital to analogue converters, running in a parallel dual mono mode, driving a high performance discrete class A current to voltage amplifier. This combination generates an exceptionally wide dynamic range, low distortion, and linear signal. We already know that streaming uncompressed music files from hard discs can sound better than CD discs and the Rega also, quite unusually, has a USB socket so you can connect it to a modern PC, and play back files from your PC utilising all of the superb digital and audio technology in the CD player. In traditional Rega fashion, they have made this as simple as you can imagine to use.

Complimenting the Isis is the Orisis integrated amplifier. This is a culmination of over 30 years of Rega’s engineering in solid-state amplifier development.

The amplifier is a super high performance dual mono amplifier housed in a custom machined aluminium case with high thermal efficiency heat sinks. Designed around “minimalist” high gain power amplifier and “passive pre-amplifier” circuit topology, a passive volume control and a single stage of power amplification between the input and the speakers the Osiris offers unrivalled performance and build-quality. It produces 162w into 8 Ω and weighs in at a mere 25.6kg!

Finally, there is a £1,000 saving if you purchase both. Please call us to arrange a demonstration.

digital streaming

linn dynamik power supply upgrade

Linn has a reputation for providing excellent performance upgrade paths for its products and the recent introduction of the Dynamik power supply continues this tradition. This internal modular power supply upgrade applies to most of the recent Linn product range.

For many years hi-fi manufacturers have realised the importance of the power supply in their products, and much of the musical resolution is a direct result of the quality of the mains signals we have to work with. In today's home environment we have vast quantities of unmusical noise-generating devices; Microwaves, central heating, fridges, mobile phone chargers, games consoles, computers et al.

The new Dynamik power supply, is not dissimilar to having your own substation literally operating in each box. Essentially, it takes in whatever mains is on offer and converts it into a voltage medium that is way above the normal frequency of everyday appliances. Linn has been doing this for many years, but with improvements in modern components have been able to make substantial improvements with Dynamik.

We can of course demonstrate the Dynamik, but all of us here at Grahams have no doubt about the benefit of this upgrade. The cost (with the exception of the Klimax loudspeakers) is £450 per item. Fitting can be done on-site (distance permitting) or by appointment whilst you wait in-store.

Do give us a call if you have any further questions about this worthwhile upgrade or visit www.grahams.co.uk/dynamik

what's new at grahams

b&w zeppelin mini

Bowers and Wilkins have gone and done it again. After two years and an unprecedented collection of glowing reviews and prestigious awards later, Zeppelin is joined by its little brother, the Zeppelin Mini.

An ideal all-in-one sound system, the streamlined Zeppelin Mini is perfect for when you want a big sound in smaller spaces. It is ideal for lounges just like its larger sibling, but it can easily be slotted into a bedroom, kitchen, or student digs.

Moving a step on from Zeppelin's intuitive docking arm design, Bowers & Wilkins has complemented the iPod user interface by designing a docking port that allows the user to grasp the iPod as if it were in the hand, as normal. It also cleverly accommodates iPod/iPhone/iTouch of differing depth through a spring-loaded docking arm that flexes to accommodate each model without adaptors or other adjustment. The dock can be effortlessly rotated through 90 degrees, allowing you even easier access to your music through the Cover Flow menu system. You can also watch videos and enhanced podcasts in this manner.

The Zeppelin Mini also adds the ability to stream music direct from your PC/Mac via a dedicated USB socket. This USB connection has the advantage of letting you synchronise your iPod or iPhone with your computer and completely by-pass the weaker analogue output stage of the iPod. Any computer system will benefit from the improved sound quality and digital processing that Zeppelin Mini's advanced Digital Signal Processing and speaker technology offer.

Zeppelin Mini comes with a pebble-like remote, which allows you to change tracks, volume and mode. The connections at the back will also let you play other sources through the unit. It operates on all mains voltages from 100V to 240V - if you take it to a foreign country, it will automatically sense the incoming voltages and adjust itself accordingly.

The Bowers & Wilkins Zeppelin Mini will be available from November 2009, priced at £299.

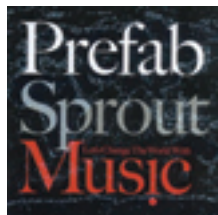

grahams recommended music

1. John Martyn Solid Air Deluxe Edition

This edition of John Martyn's classic 1973 album consists of two discs, the first containing the original album remastered, and a second with alternative takes, live versions, and three previously unreleased songs. This will serve as a fitting tribute to Martyn, who died earlier this year, here at his best, with a potent mix of folk, blues, rock and jazz, supported by a great band, including Danny Thompson, Dave Pegg and Dave Mattacks.

2 x CDs £14.00

2. Prefab Sprout Let's Change The World With Music

This album was composed, performed and recorded in demo form by the band's leader, Paddy McAloon, in 1992 as a follow up to their last record 'Jordan The Comeback'. Sony rejected the recordings at the time, which have only seen the light of day after former label, Kitchenware, asked if they could release them. McAloon has said "I've always loved these songs, and I had a chance to put an historic wrong right".

CD £14.00

3. Jennifer Warnes The Hunter (Special Edition)

Coming out five years after 'Famous Blue Raincoat' The Hunter was already known for the quality of the songs, the purity of Warnes's voice, and the excellence of the recording. However, this new edition, both on a very small batch of LPs, and 24K gold CD, is exceptional. Originally mastered by Bernie Grundman in 1992, it has been remastered in 2008 by Chris Bellman at the same facility from Warnes's original analogue master tapes.

24K Gold CD £25.00

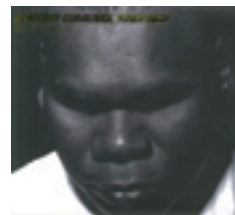

180gsm LP £35.00
(extremely limited)

4. Gwyneth Herbert All The Ghosts

This is the twenty-seven year old British singer-songwriter's third album. Her first album was on Universal, and her second was on Blue Note. Both labels were keen to market her as an English Norah Jones, or a female Jamie Cullum. But as she says, "I'm a singer who likes jazz, folk, pop and classical, and hopefully I'm a storyteller". On this CD, on the Naim Edge label, she performs her own songs, with her band, in a jazz setting.

CD £11.00

5. Geoffrey Gurrumul Yunupingu Gurrumul

This is an extraordinary debut album from an extraordinary person. Gurrumul is an Aboriginal, blind from birth, who sings his own songs, which are stories of his life, with a distinctive, pure, emotive voice, and plays a conventional right-handed strung acoustic guitar left-handed. He never gives interviews, or talks to audiences, but says "I can play and sing and tell other people things through my songs".

CD £14.00

6. Arne Domnerus Antiphone Blues

This hybrid SACD, features Arne Domnerus, who played on 'Jazz in the Pawnshop', on alto saxophone and Gustaf Sjokvist on church organ. It was recorded in the Spanga Church in Stockholm, Sweden in 1974. The musical pieces are a beautiful and inspiring collection of Duke Ellington (Sacred Concerts), spirituals, traditional Swedish hymns and classical arrangements. The recording, like 'Cantate Domino', is outstanding.

SACD Hybrid £14.00

This selection of music is available for collection or by mail order. Contact us by phone, e-mail, fax or post. Our contact details are on the front page of the newsletter. Postage & packing for 1 CD is £1.00 and for up to 4 CDs is £3.00. 1 LP is £3.00 and there is a maximum charge of £5.00. There is a 10% discount for the purchase of all six recordings

Connect 26
with floor stand
from £1,005

Hand held remote
for the new Loewe
multi-room system

loewe connect 22 and 26

Loewe has introduced two new models to its Connect range allowing you to choose now from 5 different sizes. The 22" and 26" models join the 32", 37" and 42" models and have integrated DVB-T tuners allowing you to watch all of the Freeview channels in the UK. They are available in Silver, High Gloss White and High Gloss Black.

As with all Loewe TVs these come with a range of stand and bracket options allowing you to chose either a flexi wall bracket, a table stand (included) or a floor stand. The Connect 22 will retail from £775 and the Connect 26 from £1,005.

If you want an elegant and simple expansion of your music and TV in additional rooms, the new Loewe multi-room system provides an Ethernet streaming solution for music selection and distribution. The hand-held remote uses wireless USB to talk to the media controller and local amplifier, and is an elegant Loewe design. This is now on demonstration in our Loewe room.

loewe 5 year guarantee

Loewe has extended its 5 year warranty offer on all its TVs until the end of this year. All Loewe sets come with a standard 3 year warranty, which reflects the build quality and components used in their sets. All you need to do to benefit from this is fill out the registration form when you buy a Loewe set from Grahams and we will send this off for you to receive your extra two years of peace of mind! If you have any queries or would like to take a look at a new Loewe screen please contact Simon or Jude on 0207 226 5500.

time to get plastered ?

Designed to be completely hidden in the wall and painted over, the Stealth Acoustics range of invisible in-wall speakers use some very smart patented ideas to make this hidden speaker work.

The speakers invisibility allows them to be placed wherever they sound best, free of visual concerns that may conflict with architectural features.

The loudspeaker has a rigid frame which attaches directly to standard structural framing without the need for special mounting brackets. The paintable active diaphragm face

is a structurally modified three layer composite consisting of two layers of graphics grade paper with a foam core. The diaphragm is bonded to the frame, creating an active area surrounded by a stable mounting area.

Once installed, the final finishing options include paint, covering with light wallpaper or fabrics.

See if you can spot them in the picture below ?

We have the AX3 model (£2300) in our basement demo room, why not pop in and not see them.

dnp supernova screens

As an ideal accompaniment to the new JVC projectors, we have recently introduced the DNP Supernova screens from Denmark to our range. The model shown is designed to work in higher ambient light and is ideal for installations in multi-function rooms where the décor may be less dark than in a dedicated cinema room. The electric screen drops down from the ceiling or can be wall mounted (as shown). In both cases it floats on two thin wires and thus avoids the normal black leader you would otherwise see with a large drop. The end result is a superb picture under a wide range of light conditions and an elegant solution that looks like a huge plasma screen. We now have this on demonstration in our basement demo room.

jvc D-iLA hd550 & hd950

JVC have updated its award-winning line of D-ILA home theatre projectors with the immediate introduction of two new projectors, the DLA-HD550, which replaces the HD350 and DLA-HD950, which replaces the HD750.

So what do the new models offer? For a start, both projectors feature the same D-ILA technology and features found in previous models, but add improvements in both performance and usability. Both projectors have extremely high native contrast with the HD550 at 30000:1 and the HD950 at 50000:1, that have made JVC projectors top-selling favourites among the most demanding home theatre enthusiasts.

Both look stunning with 'blacks' in particular looking natural and detailed. The HD950 projector uses for the first time Clear Motion Drive technology that gives a crisp and accurate intermediate frame, even for images with fast moving action so you can enjoy smoother and clearer images with reduced motion blurring. Typically this would be useful when watching 1080i resolution sources such as Sky Sports HD, but also standard DVD.

In addition to featuring the THX mode and certification and advanced colour calibration, the HD950 also offers ISF (Imaging Science Foundation) calibration, which allows trained installers to professionally calibrate the projector to your room and type of screens. The one-button THX preset automatically optimises the projector's image to THX standards, reproducing images that recreate what was seen when films and TV material was mastered for video playback. All this without the need for advanced calibration.

Just like the previous models, these units have a wide range of mounting options which makes them very flexible without any compromises.

To follow (at the end of the year) will be the flagship HD990 which boasts an unrivalled 70,000:1 native contrast ratio; the highest among all currently available home theatre projectors.

The DLA- HD550 retails at £3,500, the HD950 at £5,450 and the HD990 is set to retail for around £10,000. All models installed by Grahams include a three year warranty (excluding lamps). Call us to arrange a demo of the projectors.

The DNP Supernova screen is on demonstration in our basement demo room

home cinema

to have it all

Our featured installation in this issue originally started with the owners deciding to simply redecorate their house but ended up being a complete re-wire to bring the house into the 21st century.

Grahams installed a Lutron Homeworks whole house lighting control system along with a superb music system throughout the home, and a home cinema. A combination of Crestron wireless TPS-6X and in-wall (TPS-6L) touch panels were used to provide consistent control of lighting, media, door cameras and provide the music distribution. The house was also structurally wired for TV, satellite and data.

Our high-end installations use much of the same equipment, but what makes this home stand out is some of the innovative solutions we devised to solve the screen and projector mounting in the cinema. This room is a double-height space which is used as the cinema and library, with a unique mezzanine which overlooks the room below. Because of the double height at over 5m high we had to use a custom screen lift to bring the projection screen to the right viewing height. This lift mechanism was a smaller version of the one we featured in our Swiss chalet project in the last newsletter and is a great solution for dealing with very high ceilings. The whole lift and screen eventually disappear into the ceiling above and is covered with a motorised painted aluminium cover which blends into the ceiling.

Once this problem was solved we then needed to make sure the projector was also in-line with the viewing screen. Most projectors need to be located somewhere in-line with either the top or the bottom of the screen, depending on mounting orientation. Whilst we could have used a drop down projector lift with a drop of around 3m, this was not feasible or acceptable aesthetically. Our solution was an ingenious motorised projector bracket, custom designed and engineered by our friends at Future Automation. The mechanism first opens the cupboard door and then the bracket elegantly swings the projector out into position ready for use.

The video projector was one of our favoured JVC DILA projectors and the audio element based around the Arcam AV processor and separate power amplifier driving B&W 803S speakers.

Throughout the house music is provided using a range of in-ceiling speakers from B&W, with differing levels of performance depending on the room, with the standard CCM-65 used in bathrooms, to the top of the range CCM818 speakers used in the ground floor study / den. Finally, the master bedroom uses the Future Automation pop-up swivel lift mechanism which rotates the TV through 180 degrees to allow it to be watched from either the bed or seating area.

stocking fillers

ARCAM irDock: The huge popularity of the rDock has encouraged Arcam to produce an even more advanced version as a follow-up. The irDock allows anyone with a hi-fi system, irrespective of manufacturer to enjoy iPod music with superlative quality.

The irDock allows full Infra Red remote control of all iPods and iPhone (including the latest generations) as well as allowing video 'pass through' of any movie or TV show stored, thanks to the incorporation of an authentication chip from Apple®.

Price: £ 150.00

With the resurgence of vinyl it's always handy to have a home record cleaning kit. We recommend the **Knosti Disco-Antistat**, available in stock or online from our webshop. Refills are also available separately.

Price £40.00

We also have a **Keith Monks** record cleaning machine here at Grahams and we are always happy to clean your lps for you, prices start at £1.80 per record which includes a new inner sleeve.

arcam

Due to be released in December, the new Arcam AVR-500 (expected price of around £2500) follows in the footsteps of its bigger brother the AVR-600 which has already received an outstanding reception.

The AV500 is able to preserve the core performance of the AR600 but at a more affordable price by removing some of the less used connectivity.

The AVR500's seven-channel amplifier is rated at 100 watts (all channels driven) but its massive power supply ensures that it can drive even highly demanding loudspeakers without strain.

Being fully equipped for the high definition world, the AVR500 decodes all the latest Dolby and DTS high definition audio standards with phenomenal precision.

grahams staff

Congratulations are in order to several members of our team. Our best wishes go to **Piotr** and **Leigh** who both tied the knot with their respective partners during the summer and Project Manager, **Darren** and his wife Hannah, who have recently had their first baby, a lovely boy they have named Thompson.

2010 calendar

Our Grahams 2010 Calendar is now available for collection. Stocks are limited, so if you would like to reserve one for collection please call or email us (sue@grahams.co.uk) so we can put one aside for you.

naim dac

The nature of music playback is changing fast. CD has been joined by downloads, portable music players are the norm, computers increasingly being connected to hi-fi systems, and USB memory sticks used to store high-resolution music files. An external DAC (Digital to Audio Converter) capable of the same sound quality as a high-end CD player is a significant step and an exciting time for Naim to launch what is their first stand-alone DAC. The Zero S DAC, as it is named, is designed to be more than just a simple upgrade to a CD player for audiophiles, but brings several useful features and facilities not commonly found. This will be the first high-end DAC to be officially certified by Apple for its iPod. The DAC can also handle hi-resolution data.

For the technically minded, the unit uses two mono, true multi-bit Burr-Brown PCM1704K DAC chips (the same as in all Naim top-end CD players, including the CD555).

The DAC can provide a significant performance upgrade for the CDX2 and CD5 XS CD players, and HDX Hard Disk player and itself can be matched to the XPS or 555 external power supplies for even greater performance.

Some examples for its uses are:

- CD, DVD player – connect via S/PDIF
- PC – use an external USB sound card with a lossless driver, e.g ASIO
- MacBook or Mac mini – use the computer's S/PDIF optical connection
- Set-top box – connect via S/PDIF optical and set the set-top box to PCM
- iPod /iPhone give bit-perfect playback with data from properly ripped CDs
- UPnP: iPod touch/iPhone – lossless files played using PlugPlayer are bit-perfect
- USB memory stick – Naim DAC will play WAV files with sample rates of up to 768kHz (although some USB sticks may be too slow to deliver audio at high sample rates)
- Remote control – via wired, IR and Apple remote (transcodes to standard RC5 for volume)

The Naim DAC is a true high-end product that can deliver an audiophile and, more importantly, a musical performance from virtually any digital source.

The DAC features no less than eight inputs – four digital, two BNC connections and two standard phono inputs. The price of the Zero S DAC is £1,950 and will be available in November 2009.

email version of newsletter

Our newsletters are published on our website as PDFs which can be downloaded. If you would prefer to receive our newsletter electronically, please email us: newsletter@grahams.co.uk with your contact details and we'll add you to our email list.

free delivery on the web-shop

We are now pleased to offer free delivery on any orders placed on our Web-shop. Since its launch earlier this year, we've continued to develop the range of accessories and products for sale. You can buy anything from a replacement drive belt for your turntable, a CD from our Grahams recommended music section or even the B&W Zeppelin i-Pod dock from the comfort of your front room. Now with free delivery, why not visit the shop and have a look at what's on offer. You can visit the Web-shop from the link on our main Grahams website homepage or at www.grahams.co.uk/shop.
